Mind Control

(NAPS)—A new book is raising some scary questions. Among them, “Is artificial intelligence being used to control your mind?”

What if *They* had the power to control your mind...

Although fiction, “The Mind Keepers” (\$17.95 US) by Kenneth MacLean suggests that American democracy is truly threatened by an interface of computerized radio electronics utilized to manipulate the brain. The process, which has great medical and scientific promise, becomes dangerous in its potential for political control.

The author, a trained researcher, bases his book on his years of personal research into the real and potential abuse of microwave electronics.

“The Mind Keepers” is available by calling (800) 915-5969 or by visiting www.newworldpressbooks.com.
